

CS 6476: Computer Vision

Instructor: Frank Dellaert
TAs: Cusuh Ham (head TA), and 8 (9?) more TAs

Today's Class

- Who am I?
- Specifics of this course
- What is Computer Vision?

A bit about me

Originally from Belgium

1989 EE in Leuven

1993 M.Sc. ECE at CWRU

2001 Ph.D. CS, Carnegie Mellon

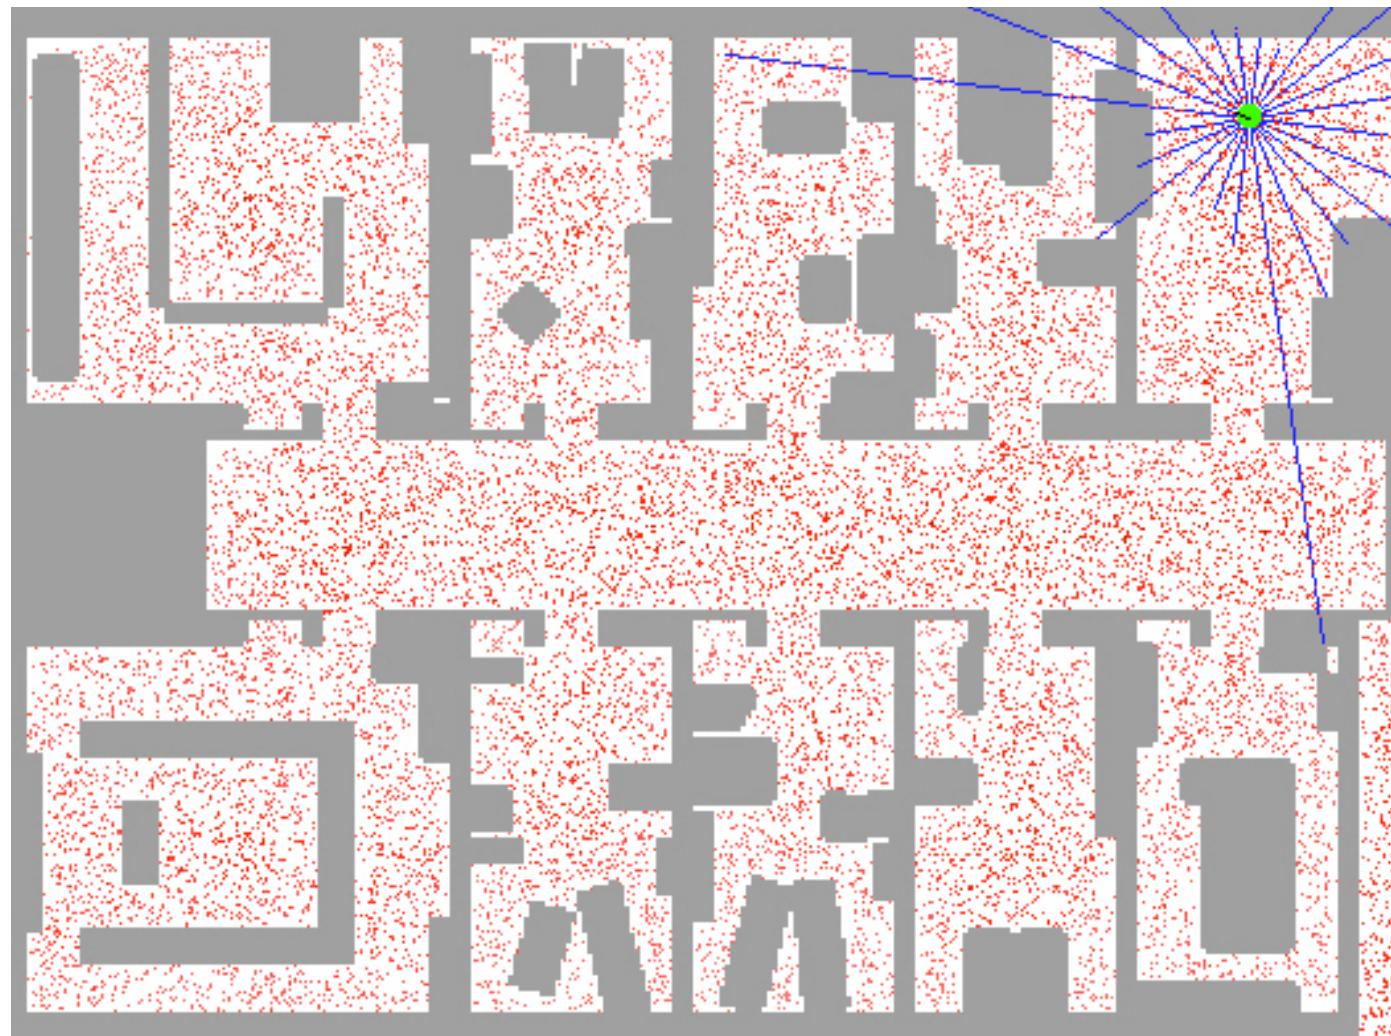

Georgia Tech since August 2001

Teaching Computer Vision etc.:

7641	Machine Learning	02, 03, 04	45
8803	3D Reconstruction and Mapping	02, 09, 10,12	70
4495	Computer Vision , undergraduate	04, 05, 06, 07	78
8803	Intro to Perception and Robotics	05, 06, 07,13,14	185
7495	Computer Vision , graduate	06, 07, 11, 12, 13	153
4475	Computational Photography	07, 09, 18	155
4480	Digital Video Special effects	08, 09, 10, 11	146
			832

Monte Carlo Localization, at Carnegie Mellon!

On-line August 24
to September 5

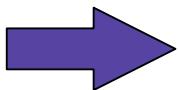

Dellaert, Fox, Burgard & Thrun, ICRA 1999
Fox, Dellaert, Burgard & Thrun, AAAI 1999

Fall '19 Computer Vision

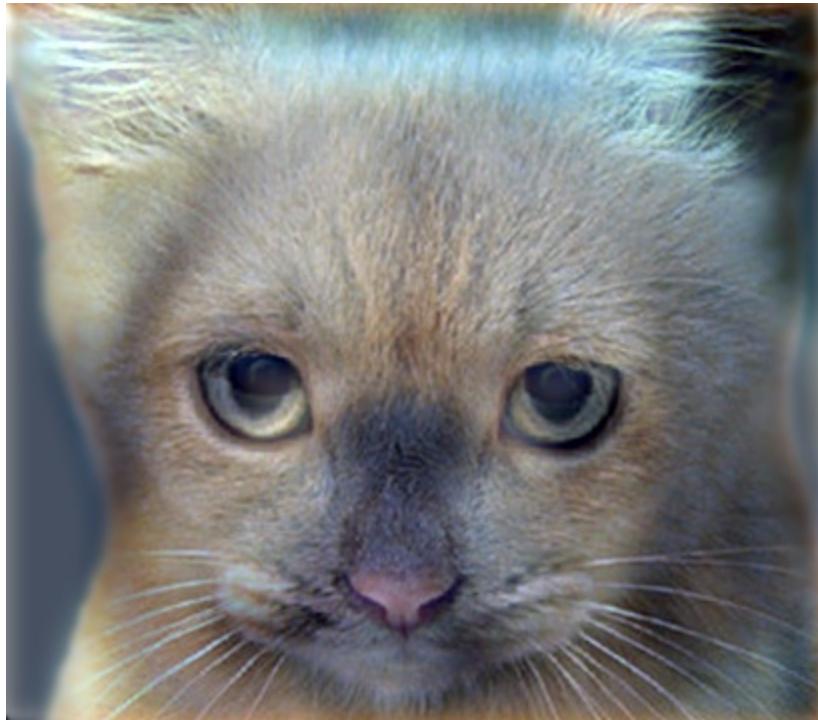

tinyurl.com/GT-19F-CS4476

or Google "Dellaert"

Proj1: Image Filtering and Hybrid Images

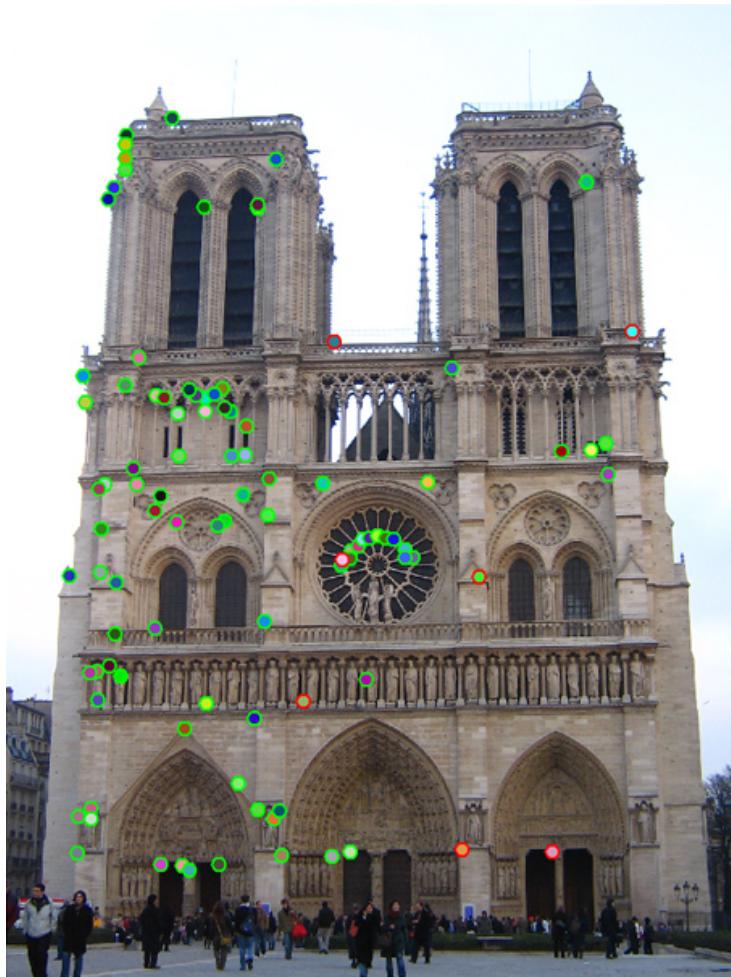

Implement image filtering to separate high and low frequencies

Combine high frequencies and low frequencies from different images to create an image with scale-dependent interpretation

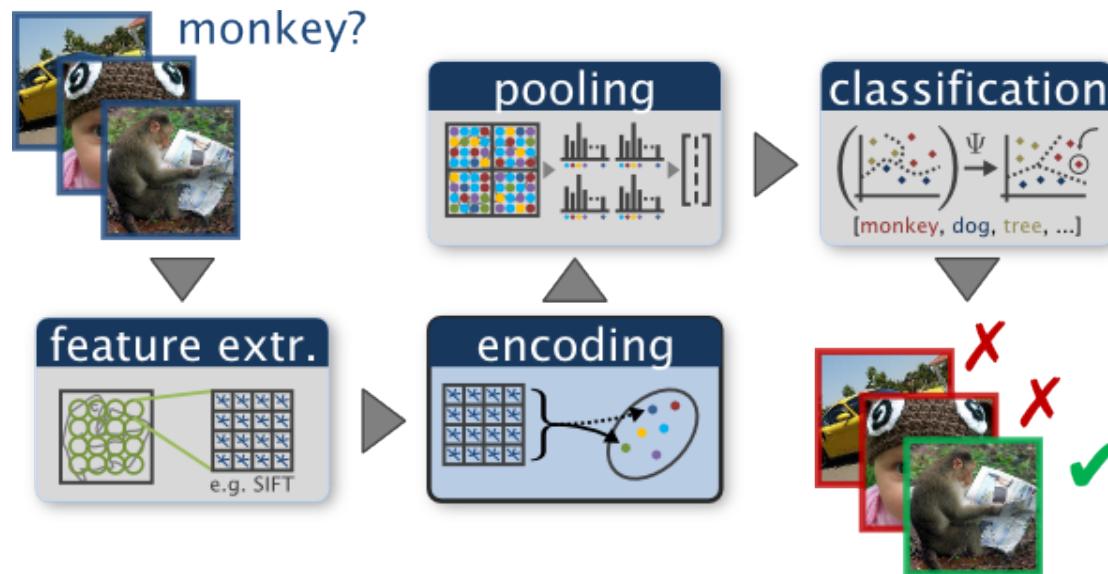

Proj2: Local Feature Matching

Implement interest point detector, SIFT-like local feature descriptor, and simple matching algorithm.

Proj5: Scene Recognition with Bag of Words

Quantize local features into a “vocabulary”, describe images as histograms of “visual words”, train classifiers to recognize scenes based on these histograms.

What is Computer Vision?

Neuroscience

Computer Vision

Make computers understand images and video **or any visual data.**

What kind of scene?

Where are the cars?

How far is the building?

...

Vision is really hard

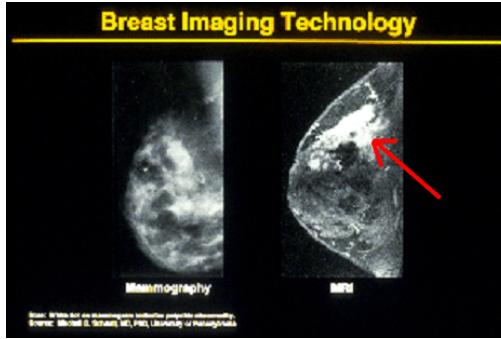

- Vision is an amazing feat of natural intelligence
 - Visual cortex occupies about 50% of Macaque brain
 - One third of human brain devoted to vision (more than anything else)

Why computer vision matters

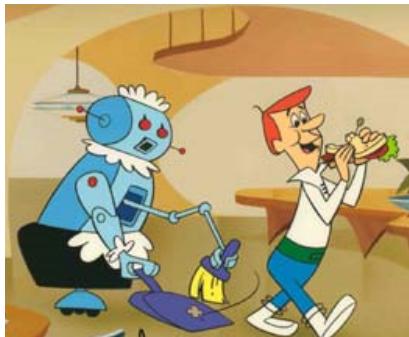

Safety

Health

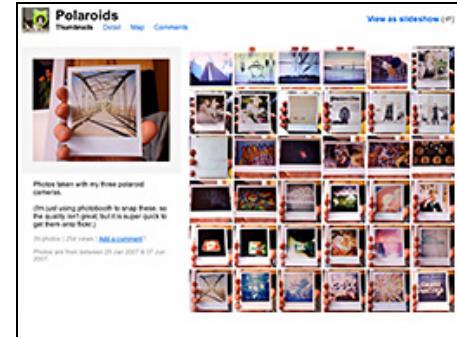

Security

Comfort

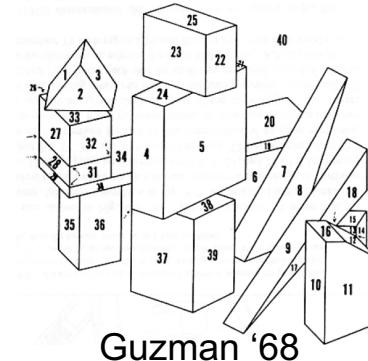

Fun

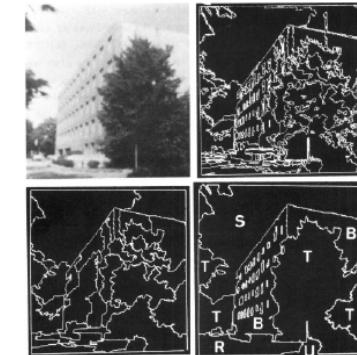

Access

Ridiculously brief history of computer vision

- 1966: Minsky assigns computer vision as an undergrad summer project
- 1960's: interpretation of synthetic worlds
- 1970's: some progress on interpreting selected images
- 1980's: ANNs come and go; shift toward geometry and increased mathematical rigor
- 1990's: face recognition; statistical analysis in vogue
- 2000's: broader recognition; large annotated datasets available; video processing starts
- 2010's: Deep learning with ConvNets
- 2020's: Widespread autonomous vehicles?
- 2030's: robot uprising?

How vision is used now

- Examples of real world applications

Optical character recognition (OCR)

Technology to convert scanned docs to text

- If you have a scanner, it probably came with OCR software

Digit recognition, AT&T labs
<http://www.research.att.com/~yann/>

License plate readers
http://en.wikipedia.org/wiki/Automatic_number_plate_recognition

Face detection

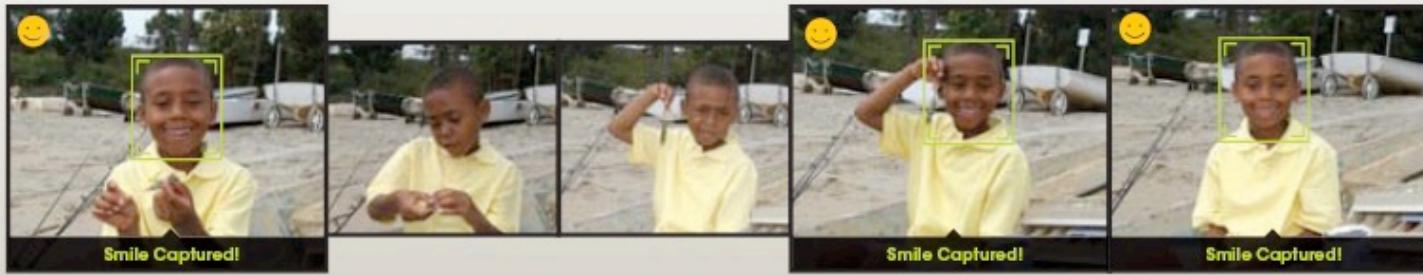

- Digital cameras detect faces

Smile detection

The Smile Shutter flow

Imagine a camera smart enough to catch every smile! In Smile Shutter Mode, your Cyber-shot® camera can automatically trip the shutter at just the right instant to catch the perfect expression.

The image shows a screenshot of the Mobileye website. At the top, there are navigation tabs: 'manufacturer products' (with a right arrow), 'consumer products' (with left and right arrows), and 'News'. Below this is a banner with the text 'Our Vision. Your Safety.' and an overhead view of a car with three cameras labeled: 'rear looking camera', 'forward looking camera', and 'side looking camera'. Below the banner are three main sections: 'EyeQ Vision on a Chip' (with an image of a chip), 'Vision Applications' (with an image of a person walking across a crosswalk), and 'AWS Advance Warning System' (with an image of a dashboard display). To the right, there is a 'News' sidebar with a list of articles and a 'Events' sidebar with links to 'Mobileye at Equip Auto, Paris, France' and 'Mobileye at SEMA, Las Vegas, NV'.

<https://www.amazon.com/b?node=8037720011>

State of the art today?

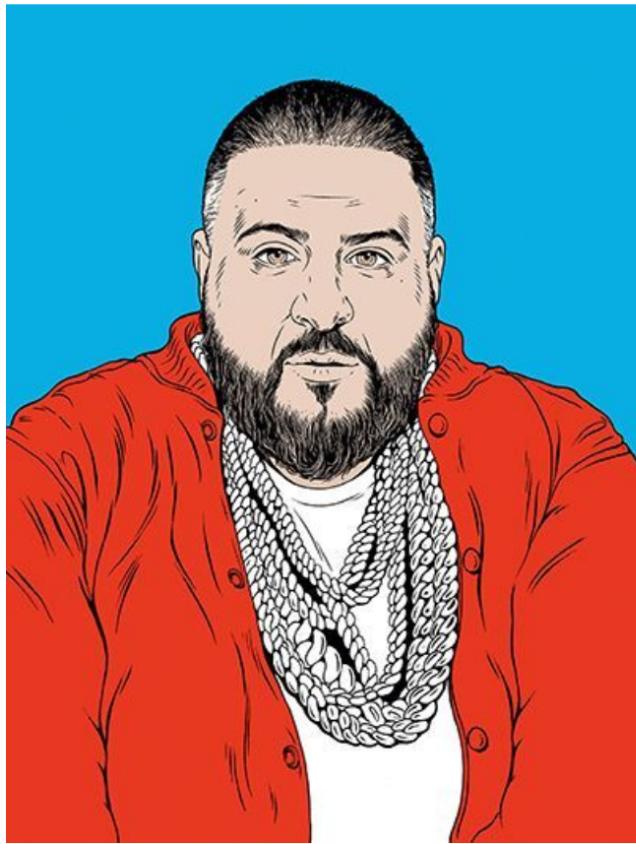

With enough training data, computer vision nearly matches human vision at most recognition tasks

Deep learning has been an enormous disruption to the field. More and more techniques are being “deepified”.

WIRED

WHO'S SHAPING THE DIGITAL WORLD?

DJ Khaled

Credit [Louise Zergaeng Pomeroy](#)

73. DJ Khaled

Snapchat icon; DJ and producer

Louisiana-born Khaled Mohamed Khaled, aka DJ Khaled, cut his musical chops in the early 00s as a host for Miami urban music radio WEDR. He proceeded to build a solid if not dazzling career as a mixtape DJ and music producer (he founded his label We The Best Music Group in 2008, and was appointed president of Def Jam South in 2009).

69. Geoffrey Hinton

Psychologist, computer scientist; researcher, Google Toronto

British-born Hinton has been dubbed the "godfather of deep learning". The Cambridge-educated cognitive psychologist and computer scientist started being an ardent believer in the potential of neural networks and deep learning in the 80s, when those technologies enjoyed little support in the wider AI community.

But he soldiered on: in 2004, with support from the Canadian Institute for Advanced Research, he launched a University of Toronto programme in neural computation and adaptive perception, where, with a group of researchers, he carried on investigating how to create computers that could behave like brains.

Hinton's work – in particular his algorithms that train multilayered neural networks – caught the attention of tech giants in Silicon Valley, which realised how deep learning could be applied to voice recognition, predictive search and machine vision.

The spike in interest prompted him to launch a free course on neural networks on e-learning platform Coursera in 2012. Today, 68-year-old Hinton is chair of machine learning at the University of Toronto and moonlights at Google, where he has been using deep learning to help build internet tools since 2013.

63. Yann Lecun

Director of AI research, Facebook, Menlo Park

LeCun is a leading expert in deep learning and heads up what, for Facebook, could be a hugely significant source of revenue: understanding its user's intentions.

62. Richard Branson

Founder, Virgin Group, London

Branson saw his personal fortune grow £550 million when Alaska Air bought Virgin America for \$2.6 billion in April. He is pressing on with civilian space travel with [Virgin Galactic](#).

61. Taylor Swift

Entertainer, Los Angeles

Credit [Google DeepMind](#)

Google-backed startup DeepMind Technologies has built an [artificial intelligence](#) agent that can learn to successfully play 49 classic Atari games by itself, with minimal input.

The story of AlphaGo so far

AlphaGo is the first computer program to defeat a professional human Go player, the first program to defeat a Go world champion, and arguably the strongest Go player in history.

AlphaGo's first formal match was against the reigning 3-times European Champion, Mr Fan Hui, in October 2015. Its 5-0 win was the first ever against a Go professional, and the results were published in full technical detail in the international journal, [Nature](#). AlphaGo then went on to compete against legendary player Mr Lee Sedol, winner of 18 world titles and widely considered to be the greatest player of the past decade.

AlphaGo's 4-1 victory in Seoul, South Korea, in March 2016 was watched by over 200 million people worldwide. It was a landmark achievement that experts agreed was a decade ahead of its time, and earned AlphaGo a 9 dan professional ranking (the highest certification) - the first time a computer Go player had ever received the accolade.

During the games, AlphaGo played a handful of [highly inventive winning moves](#), several of which - including move 37 in game two - were so surprising they overturned hundreds of years of received wisdom, and have since been examined extensively by players of all levels. In the course of winning, AlphaGo somehow taught the world completely new knowledge about perhaps the most studied and contemplated game in history.

Since then, AlphaGo has continued to surprise and amaze. In January 2017, an improved AlphaGo version was revealed as the online player "Master" which achieved [60 straight wins in online fast time-control games](#) against top international Go players.

In May 2017, Alpha Go took part in The Future of Go Summit in the birthplace of Go, China, to delve deeper into the mysteries of Go in a spirit of mutual collaboration with the country's top players. You can read more about the five day summit [here](#).
